NEWS RELEASE May 24, 2004

SAFER TOOLS WHILE CLIMBING HIGH

While there are several flimsy coiled-elastic lanyards around for attaching small tools like screw drivers and pliers to your wrist, there isn't anything strong enough to hold heavier hand and power tools like rechargeable drills, staple guns, rivet tools, battery screwdrivers, Dremel® tools, hand saws, pruning shears, etc. Until now, that is.

If you happen to drop a 5-pound cordless drill off your roof, one of three things will happen: the drill will shatter (there goes \$60); you'll damage whatever it lands on (there goes your car windshield); or you'll badly injure or kill someone if they're standing beneath you (there goes your Uncle Bob).

Attach a SHOCKLES® ToolTether™ to your tool (up to 5 pounds), clip it to your belt, ladder, railing or whatever, and never have to worry about dropping it again. Working around the water? No more worries! Up pruning a tree? Your saw or clippers are totally safe. Best of all, if you do drop it, the built in shock-cord will keep it from yanking you off your roof or ladder, bringing it to an easy stop rather than a jarring jolt.

The ToolTether is also great for working on your boat (around the dock or up on a mast), RV, treehouse, or orchard—anywhere that a dropped tool could mean big trouble.

The Marine-Grade anodized aluminum carabiners on either end are rated to 600# breaking strength and the 36" long tubular nylon sheath will easily hold a tool falling up to eight feet. The protected shock-cord inner will stretch to 175% its static length, meaning lots of stretch for reaching high.

The ToolTether™ easily attaches to almost any tool and it comes with a 1" ring to attach to your favorite tool (zip-ties included); additional rings and a urethane Quick Attachment Strap are available. The ToolTether™ comes in four colors (bright red, royal blue, sterling silver and jet black) and for just \$17.95 they might just be the best tool investment you ever made.
